Healthy Body, Healthy Mind

Research has shown that what is good for your heart is also good for your brain. What we eat, how much we move, how well we sleep, and how we manage stress affects nearly every aspect of our well-being, including physical and mental health.

It is common to think that health and longevity are genetic traits. While genes do determine 20 to 25% of our overall health quality, lifestyle habits and the environment have a much greater influence on how well or long we live. While some benefits of a healthy lifestyle won’t be realized for weeks or months, you will probably feel better immediately after a walk or other physical activity.

Exercise increases brain chemicals associated with feeling happy, feeling less anxiety and stress, and even less physical pain. Getting more movement can also help some people relieve feelings of depression.

Other positive lifestyle habits will bring results quickly. Eating well and getting good rest will pay immediate dividends on your mental outlook and energy level.

How Long Do Eggs Last?

Keep eggs in the original carton in the refrigerator, not in the fridge door.
Eggs will last 3 weeks after the sell-by date.
Did you know that eggs can be frozen? They can!

Turn Over a New Leaf

We are learning about the MIND diet during Walk Kansas 2022. One of the most important components of the MIND diet is leafy green vegetables. They are rich in nutrients known to be protective of cognition and brain function, including folate, vitamin E, lutein, and beta carotene. Research shows that eating one serving of leafy greens per day can make a significant impact on brain health.

Foods included in the superfood category of leafy greens include spinach, kale, mustard greens, collard greens, Swiss and rainbow chard, turnip and beet greens, Napa cabbage, bok choy, watercress, arugula, romaine lettuce, microgreens, and spring mix. One serving is 2 cups raw or 1 cup cooked greens.

What is folate? It is a B vitamin that is naturally found in food. Foods high in folate include edamame, lentils, leafy green vegetables, peas, broccoli, asparagus, and black beans. Folate is not made by the body, and it is an essential nutrient that you must get from food sources. It is needed to make DNA and other genetic material and it helps cells divide. Don’t be confused by the terms folate and folic acid. They have the same effects. Folate is the natural version found in foods, while folic acid is the man-made version found in supplements and added to foods. Both play an important role in health, but you cannot eat too much folate from food sources, so it’s healthy to “veg up!”

Vitamin E is a nutrient that is important to vision, reproduction, health of your blood and skin, and especially brain health. This nutrient has strong antioxidant properties, which means it protects your cells against damage by free radicals. These are molecules produced when your body breaks down food or is exposed to tobacco smoke and radiation. Foods rich in fat-soluble vitamin E include canola and olive oil, leafy greens, almonds, peanuts, sunflower seeds, wheat germ, avocados, salmon, and red bell peppers. When nutrition professionals talk about healthy fats, vitamin E is front and center.

Lutein and beta carotene are powerful antioxidants as well. These nutrients are often associated with eye health and vision. They also support brain health, and sources include yellow, orange, and green leafy fruits and vegetables. There are so many ways to enjoy leafy green vegetables! Use your creativity and change it up with fruits, nuts, fresh herbs, other veggies (including leftover roasted veggies,) a bit of cheese, and a light salad dressing. 🍃
Skillet Zucchini Creole

Source: fruitsandveggies.org

Servings: 7

Ingredients:
- 1 Tbsp water
- 4 cups zucchini, washed and sliced
- 1 cup onion, sliced
- 2 tomatoes, washed and sliced
- 1 green pepper, washed and sliced
- 1/8 tsp pepper

Directions:
1. Wash hands for 20 seconds with soap and water.
2. Wash and slice vegetables.
4. Cook covered for about ten minutes until tender. Serve.
5. Refrigerate leftovers.
